

Practical Title: Creating an Application in Salesforce

Practical No: 3

Page No.	
Date	

Practical - 3.

\* steps -

- ① Search for - Salesforce Trailhead, open trailhead.salesforce.com.
- ② click on start for free, create account with email. (fill basic information).
- ③ Now, on Salesforce page, search for developer console <sup>Basics</sup>, open second module. (Navigate and edit source code).
- ④ scroll down and click on ~~Launch~~ Launch Button → developer console will get open.
- ⑤ click on file → new Apex class → Give class name. (FirstClass).
- ⑥ example.
  - Ⓐ 

```
public class FirstClass {
    public static void firstMethod() {
        System.debug('First Apex program');
    }
}
```
  - Ⓑ click on file → save.
  - Ⓒ click on debug → open Execute Anonymous window → type (FirstClass.firstMethod());
  - Ⓓ click on opening and execute.
  - Ⓔ new window will open, click on Debug only you will get success message.
